ABOUT US

Studybalancer is a premier provider of cutting-edge training programs in cloud computing and DevOps. We aim to provide training on the most demanding courses, including AWS (Amazon Web Services), Microsoft Azure, Google Cloud Platform (GCP), and DevOps. Our courses cater to both freshers and professionals looking to upskill and advance their careers.

Our course curriculum is unique and exceptional, offering content that is not available anywhere else in the market. We ensure that our training programs are comprehensive, up-to-date, and tailored to meet the specific needs of our students.

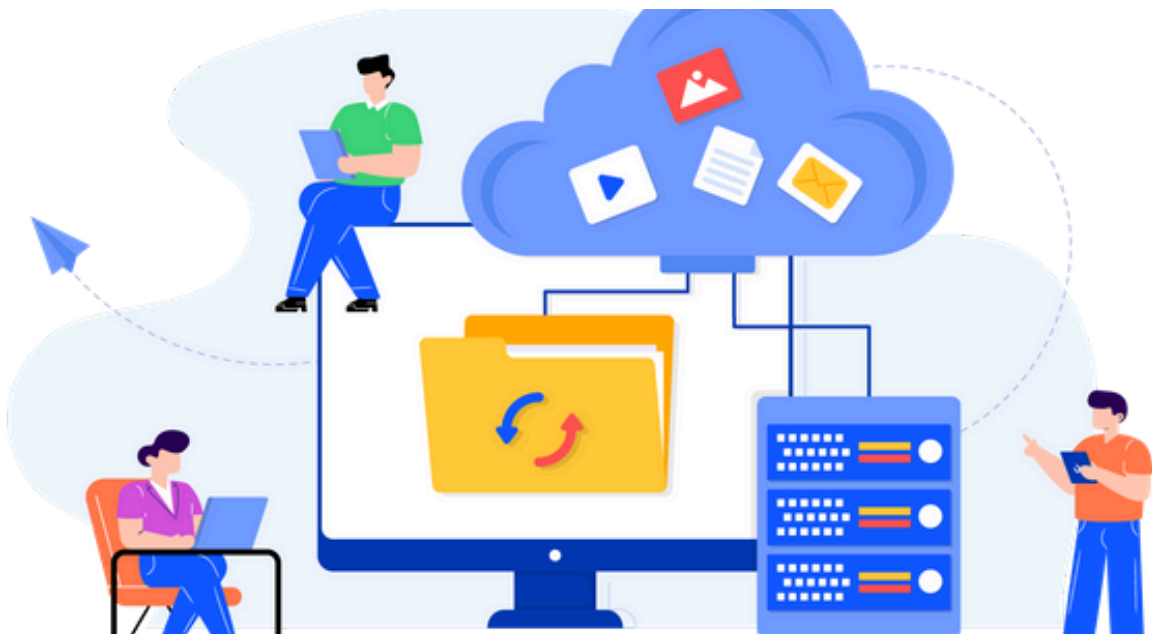

We bring the best learning experience for both individuals and organisations through our interactive, customized courses.

OVERVIEW

The AWS Certified Solutions Architect – Associate certification is one of the most sought-after credentials in the cloud computing domain. This course prepares you to design and deploy scalable systems, optimize performance, and understand the best practices for managing cloud architectures using AWS services.

With a blend of theoretical knowledge and hands-on practice, this course ensures you're fully prepared to pass the certification exam and tackle real-world cloud architecture challenges.

PREREQUISITES

- Basic computer knowledge.
- Familiarity with Linux is beneficial but not mandatory.
- The course is ideal for:
 1. Network engineers and system administrators.
 2. Individuals with a solid understanding of coding concepts and processes looking to expand their skill set.
 3. New graduates with a basic background in coding, aiming to start their careers in cloud computing.

The AWS Certified Solutions Architect – Associate certification is focused on the design of cost-efficient, performance-optimized, and secure applications on the AWS platform. Here's a breakdown of the main domains and topics covered in the exam:

01. DESIGN SECURE ARCHITECTURES (30%)

- **Design secure access to AWS resources:** Implement identity and access management (IAM), secure root accounts, and IAM policies.
- **Design secure application tiers:** Secure data at rest and in transit, implement least-privilege principles.
- **Select appropriate data security options:** Encryption and security controls.

02. DESIGN RESILIENT ARCHITECTURES (26%)

- **Design high availability and/or fault-tolerant architectures:** Understand disaster recovery (DR) strategies, replication, and redundancy.
- **Determine resource allocation strategies:** Use of Amazon EC2 autoscaling and integration with load balancers.
- **Determine how to design decoupling mechanisms:** AWS services for asynchronous decoupling, such as SNS, SQS, and Lambda.

03. DESIGN HIGH-PERFORMING ARCHITECTURES (24%)

- **Identify elastic and scalable compute solutions for a workload:** Amazon EC2, AWS Lambda, and Elastic Beanstalk.
- **Select high-performing resilient storage solutions:** Understand EBS, S3, and Glacier for different scenarios.
- **Design high-performing networks:** VPC, CDN solutions like CloudFront, and AWS Global Accelerator.

04. DESIGN COST-OPTIMIZED ARCHITECTURES (20%)

- **Identify cost-effective storage solutions:** Leverage S3 Infrequent Access, Glacier, and lifecycle policies.
- **Identify cost-effective compute and database services:** Use RDS Reserved Instances and EC2 Spot Instances.
- **Design cost-optimized network architectures:** Efficiently use bandwidth costs and AWS Direct Connect/VPNs.

Each domain covers specific topics to ensure you have a comprehensive understanding of AWS services and best practices. This will help you design, manage, and deploy robust applications on AWS.
